6. DESCRIPTION OF DEFECT:
The affected population was identified by the presence of a wire harness used to supply 12-volt DC power to certain furniture assemblies containing undersized wiring connected to a 15-amp DC general-purpose circuit. The original wire harness did not provide circuit protection for the undersized wiring used within the furniture.

7. SAFETY REGULATION(S)/STANDARD(S):
If the furniture wiring becomes pinched or shorted, shorted wiring can lead to an increased risk of personal injury or fire.

8. MEASURES TAKEN TO CORRECT DEFECT:
The remedy consists of replacing the harness with an updated version that incorporates a 7.5-amp fuse, providing overcurrent protection for the wiring in the event of a direct short circuit. We will advise retail owners to unplug the 12v power from the furniture until the remedy has been performed.
